

Computer System: -Combination of Hardware, Software and Data which is solve the human problem

Example: Editing picture.

1. We require software for editing pictures (editing software).
2. The software is installed on the hard disk, and the data is stored in the CPU's memory (data storage).
3. When we attempt to edit, the CPU loads the code into RAM and retrieves the code line by line. This process requires the use of PC hardware.
